EDUCATION

Northeastern University, Boston, MA

Bachelor of Science in Computer Science and Fintech

Dec. 2026

Honors: GPA: 3.83 / 4.00, Dean's List

Related Courses: Object-Oriented Design, Algorithms and Data, Introduction to Databases, Computer Systems, Mobile Application Development, Discrete Mathematics, Investments, Profit Analysis for Managers and Advisors, Financial Management, Public Speaking, Fintech and Fin Innovation, Investments

Fordham University Gabelli School of Business, Bronx, NY

Bachelor of Science in Finance

Aug. 2022 - May 2024

Honors and Awards: GPA: 3.9 / 4.0, Dean's List, Woolworth Scholar, Manresa Scholar, Best Business Plan Award

Relevant Courses: Statistics and Software, Introduction to Marketing, Financial Accounting and Reporting

TECHNICAL SKILLS

Languages: Python, Java, C/C++, HTML, CSS, JavaScript, Rust, R, TypeScript, Swift

Tools / Frameworks: React, Electron, MongoDB, SQLite, Node.js, CI/CD Pipelines, SNYK

EXPERIENCE

Full Stack Software Engineer, Code Works, Boston, MA

May 2024 - Aug. 2025

- Developed custom CRM systems using Google Workspace APIs and App Script to automate onboarding, scheduling, and reporting, thereby reducing setup time by 55% and supporting 200+ clients.
- Designed dynamic web interfaces and custom menus using HTML, CSS, and JavaScript, creating user-friendly dashboards and onboarding tools that improved client adoption.
- Integrated Google Sheets, Gmail, and Calendar into unified workflows, enabling real-time data sync and automated client communications, saving hours of manual work weekly.

Wealth Management Intern, Riverside Financial, Riverside, CT

May 2023 - Aug. 2023

- Automated ETF data collection and reporting by integrating the Morningstar API with VBA and Excel, reducing manual data retrieval time by 70%.
- Conducted technical analysis (**RSI**, **MACD**) and portfolio risk assessment, supporting retirement goals across **\$100M+** in assets.
- Delivered daily market insights and tailored investment research to senior advisors, enhancing decision-making and improving client engagement.

PROJECT EXPERIENCE

Developer, Full Stack News Consolidator, Tech. Stack: Python, Express.js, MongoDB, React

May 2024

- Built a full-stack application to scrape, store, and display business news from multiple sources using Python, Express.js, MongoDB, and React. Wrote scrapers with rotating proxies and randomized headers to bypass anti-bot measures.
- Architected backend REST APIs with Express and Mongoose to store data in MongoDB for persistent storage and enabling full CRUD operations.

Developer, Rust Order Book + Ledger Exchange, Tech. Stack: Rust, Axum, Tokio, WebSockets

Sep. 2025

- Developed a high-frequency trading limit order book in Rust using BTreeMap and VecDeque to enforce price-time priority and FIFO matching. Unit-tested matching, partial fills, and cancels help sustain >100k orders/sec with deterministic replay and ~50us per-order matching latency.
- Extended the engine into a micro-exchange service with async REST APIs (Axum + Tokio), supporting order placement/cancellation, best bid/ask queries, depth views, and trade streaming via WebSocket's.
- Implemented a tamper-evident ledger subsystem that asynchronously records trades and orders into a hash-chained event log, enabling 100% crash recovery, full trading history replay with impacting exchange.

Developer, Rust Order Book + Ledger Exchange, Tech. Stack: Python, Dash, Plotly

Sep. 2025

- Developed a real-time stock analysis app using Python, Dash, and Plotly, integrating advanced technical indicators (RSI, Moving Averages, MACD) and real-time Yahoo Finance data through interactive candlestick charts.
- Configured PyInstaller to build standalone executables, enabling easy distribution across multiple platforms.
